

Overview

A stable, more diverse resource to help your company gain the competitive advantage with innovative problem solving and performance plastics solutions.

Our advanced facilities have diverse capabilities to produce customized films with innovative value-added features such as:

- Flame-retardant
- Anti-static
- Wide widths and thick gauges
- Low temperature melt
- Anti-corrosive
- High temperature resistant
- High-impact print and conversion
- Micro perforation

Marshall Plastic Film Inc.

Our first roll of film was shipped in 1973. since that time, we have seen many changes take place within our industry and within our company. Remaining unchanged is our belief in providing customers with only the highest quality products and total satisfaction.

Located south of Grand Rapids, Michigan, we produce wide variety of customer film and bag products to meet the needs of a diverse customer base. Our own fleet of trucks allow us to meet tight customer delivery schedules.

We manufacture a complete line of general purpose film products – plus we have developed expertise in meeting the specialized requirements of the pharmaceutical, meat, poultry, automotive, and other industries.

Our philosophy is to meet customer needs by staying at the leading edge of new technologies. By using the newest production equipment and processes and by buying the highest quality materials, we have developed unique thin-gauge, super-strong plastic films that reduce customer costs and improve film performance.

Our commitment to excellence has been recognized and rewarded.

Our Strength

All plastic film is not alike. With Marshall Plastic Film, you can specify unique custom-engineered plastic films which can:

Reduce your film costs

Since Marshall films are stronger than what you may be using, you can most likely downsize to a thinner gauge. Typically our films can be 25% to 50% thinner than the films they replace, without any change in film strength. Less film means you pay less.

Solve tearing, sealing and other problems

By replacing your existing film with an equal thickness of our new films, you can increase film strength significantly. Parts will no longer poke through the package and bags that previously leaked will now efficiently contain their contents.

Allow you to develop better packaging solutions

Our new films may permit you to take a whole new approach, providing better solutions for all your packaging and containment problems. For example, you may be able to switch from the use of paper or cardboard to less costly and more efficient plastic film, allowing you to package things in a way that you couldn't before.

Performance-Driven

We will produce high quality products and we will lower our customers overall film costs by our use of "leading edge" materials and processes.

Total Integration

From extrusion and multi-layer laminations to superior printing and conversion technologies, MPF's critical mass provides customers with complete turnkey services that help them gain a competitive edge. Our international reach and innovation-savvy personnel ensure our performance-driven solutions consistently meet and surpass design engineering specifications.

Performance Packaging

From VCI bin liners that prevent rusting of metal parts during shipping to low temperature melt films for batch inclusion packaging; we can create a package that suits your needs. Value-added qualities like perforations and high-impact printing further protects your product and builds brand loyalty.
